

**ANNA UNIVERSITY, CHENNAI**  
**NON- AUTONOMOUS COLLEGES**  
**AFFILIATED TO ANNA UNIVERSITY**  
**MASTER OF COMPUTER APPLICATIONS (2 YEARS)**  
**REGULATIONS 2025**

**PROGRAMME OUTCOMES (POs):**

| <b>PO</b>  | <b>Programme Outcomes</b>  |
|------------|--|
| <b>PO1</b> | An ability to independently carry out research /investigation and development work to solve practical problems   |
| <b>PO2</b> | An ability to write and present a substantial technical report/document.   |
| <b>PO3</b> | Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program |

**PROGRAMME SPECIFIC OUTCOMES:**

- PSO1:** Design and develop computer applications by applying programming, database, networking, and system software knowledge to meet real-world requirements.
- PSO2:** Apply modern computing technologies and frameworks, including AI, cloud, and web platforms, to build efficient, user-friendly, and secure applications.

## ANNA UNIVERSITY, CHENNAI

### **POSTGRADUATE CURRICULUM (NON-AUTONOMOUS AFFILIATED INSTITUTIONS)**

**Programme:** Master of Computer Applications (2 Years)

**Regulations:** 2025

**Abbreviations:**

**BS** – Basic Science (Mathematics)

**L** – Laboratory Course

**ES** – Engineering Science (Programme Core (**PC**),  
Programme Elective (**PE**))

**T** – Theory

**SD** – Skill Development

**LIT** – Laboratory Integrated Theory

**SL** – Self Learning

**PW** – Project Work

**OE** – Open Elective

**TCP** – Total Contact Period(s)

### **Semester – I**

# Semester I

|   |   |   |   |   |   |
|---|---|---|---|---|---|
| MC25101   | Mathematical Foundation for Computer Applications | L | T | P | C |
|   |   | 3 | 1 | 0 | 4 |
| <b>Course Objectives:</b> <ul style="list-style-type: none"><li>• To apply fundamental concepts of discrete mathematics in the context of computer science and software development.</li><li>• To develop the ability to model and solve computational problems using mathematical tools such as combinatorics, matrices, graph theory, and number theory.</li><li>• To enhance analytical and logical thinking skills necessary for designing algorithms, analyzing complexity, and supporting various applications in computer science.</li></ul> |   |   |   |   |   |
| <b>Relations and Functions:</b> Properties of Binary Relations, equivalence, transitive closure, compatibility and partial ordering relations – Inverse Function Composition of functions, recursive functions Lattices – Hasse diagram, Lattice and its Properties.  |   |   |   |   |   |
| <b>Propositional and predicate Logic:</b> Propositional logic – Logical connectives – Truth tables – Normal forms (principal conjunctive and principal disjunctive normal forms) – Predicate logic – Universal and existential quantifiers – Proof techniques – Direct and indirect proofs – Proof by contradiction – Mathematical Induction.   |   |   |   |   |   |
| <b>Recurrence Relation and Generating Function:</b> Generating Functions – Function of Sequences Calculating Coefficient of generating function, Recurrence relations – Solving recurrence relation by substitution and Generating funds. Characteristics roots solution of In homogeneous Recurrence Relation.   |   |   |   |   |   |
| <b>Graph Theory:</b> Basic terminology: Different types of graphs – Directed and undirected, Simple, Pseudo, Complete, Regular, Bipartite. Incidence and degree, Pendant and Isolated vertex and Null graph. Isomorphism, Sub graphs, Walk, Path and Circuit, Connected and disconnected graphs and components, operations on graphs. Euler Graphs, Fleury’s Algorithm – Hamiltonian circuits and paths. Traveling salesman problem. Matrix representation of graphs – Incidence and Adjacency matrices.  |   |   |   |   |   |
| <b>Grammars and Automata:</b> Alphabets, Strings and Languages; Automata and Grammars, Deterministic finite Automata (DFA) – Formal Definition, Simplified notation: State transition graph, Transition table – Language of DFA, Nondeterministic finite Automata (NFA), NFA with epsilon transition – Language of NFA, Equivalence of NFA and DFA, Minimization of Finite Automata.  |   |   |   |   |   |
| <b>Weightage:</b> Continuous Assessment: 40%, End Semester Examinations: 60%.   |   |   |   |   |   |
| <b>Assessment Methodology:</b> Assignments (15), Quiz (10), Virtual Demo (20), Flipped Class Room (10), Review of Gate and IES Questions (25), Project (20).  |   |   |   |   |   |

|   |                                 | 3 | 0 | 0 | 3 |
| <b>Course Objectives:</b> <ul style="list-style-type: none"><li>• To impart knowledge of software testing principles and life cycle models for ensuring software quality and reliability.</li><li>• To enable students to design effective test cases and utilize automation tools for functional and non-functional testing.</li><li>• To develop skills in implementing automated testing frameworks for real-world software projects.</li></ul>                      |                                 |   |   |   |   |
| <b>Foundations of Software Testing:</b> Foundations of Software Testing Introduction to test Software, Black-Box Testing and White-Box Testing-Software Testing Life Cycle, V- model of Software Testing-Program Correctness and Verification, Reliability versus Safety, Failures, Errors and Faults (Defects), Software Testing Principles, Program Inspections, Stages of Testing, Unit Testing-Integration Testing, System Testing.                                 |                                 |   |   |   |   |
| <b>Activities:</b> <ul style="list-style-type: none"><li>• Creation of Black-Box and White, Box test cases based on functional and Non-functional requirements.</li><li>• Simulation of Software Testing Life Cycle to understand the stages of testing</li></ul>   |                                 |   |   |   |   |
| <b>Test Planning:</b> The Goal of Test Planning, High Level Expectations, Intergroup Responsibilities, Test Phases, Test Strategy, Resource Requirements, Tester Assignments, Test Schedule, Test Cases, Bug Reporting, Metrics and Statistics.   |                                 |   |   |   |   |
| <b>Activities:</b> <ul style="list-style-type: none"><li>• Design a comprehensive test plan for a sample software project,</li><li>• Bug Reporting and Metrics Simulation.</li></ul>  |                                 |   |   |   |   |
| <b>Test Design and Execution:</b> Test Objective, Identification, Test Design, Factors, Requirement, identification, Testable, Requirements, Modeling a Test Design Process, Modeling Test Results, Boundary Value Testing, Equivalence Class Testing, Path Testing-Data Flow Testing, Test Design Preparedness Metrics, Test Case Design Effectiveness, Model, Driven Test Design, Test Procedures, Test Case Organization and Tracking-Bug Reporting, Bug Life Cycle. |                                 |   |   |   |   |
| <b>Activities:</b> <ul style="list-style-type: none"><li>• Conduct load, stress, volume, fail-over, recovery, and configuration tests on a sample application</li><li>• Test a web or mobile application for usability, compatibility, security.</li></ul>  |                                 |   |   |   |   |

**Advanced Testing Concepts:** Performance Testing: Load Testing, Stress Testing, Volume Testing, Fail-Over Testing, Recovery Testing-Configuration Testing, Compatibility Testing, Usability Testing, Testing the Documentation, Security testing, Testing in the Agile Environment-Testing Web and Mobile Applications.

**Activities:**

- Perform configuration tests on a web or mobile application using performance testing tools
- Performing iterative testing in an Agile environment on web and mobile applications.

**Test Automation and Tools:** Automated Software Testing, Automate Testing of Web Applications-Selenium: Introducing Web Driver and Web Elements, Locating Web Elements, Actions on Web Elements, Different Web Drivers, Understanding Web Driver Events, Testing: Understanding Testing.xml, Adding Classes, Packages, Methods to Test-Test Reports.

**Activities:**

- Use Selenium WebDriver to generate test reports.
- Design automated test scripts on a sample web application

**Weightage:** Continuous Assessment: 40%, End Semester Examinations: 60%.

**Assessment Methodology:** Assignments (15), Quiz (10), Virtual Demo (20), Flipped Class Room (10), Review of Gate and IES Questions (25), Project (20).

|     | <b>Description of CO</b>  | <b>PO</b> | <b>PSO</b> |
|-----|---|-----------|------------|
| CO1 | Explain software testing principles and defect management to ensure software reliability. | --        | --         |
| CO2 | Apply test planning strategies using black-box and white-box techniques.                  | PO1(3)    | PSO1(3)    |
| CO3 | Develop automated test scripts to validate functionality, performance, and security.      | PO3(2)    | PSO2(2)    |
| CO4 | Evaluate advanced testing methodologies to address real-world challenges.                 | PO2(1)    | PSO1(3)    |

|   |   |   |   |   |   |
|---|---|---|---|---|---|
| MC25104   | Data Structures and Algorithms using Python | L | T | P | C |
|   |   | 2 | 0 | 2 | 3 |
| <b>Course Objectives:</b> <ul style="list-style-type: none"><li>To provide a strong understanding of fundamental data structures and their implementation in Python.</li><li>To enable students to design, analyze, and implement efficient algorithms for searching, sorting, and problem-solving using Python.</li><li>To develop skills in applying algorithmic thinking and data structure concepts to real-world computational problems</li></ul>  |   |   |   |   |   |
| <b>Python Programming and Algorithmic Analysis:</b> Python environment, variables, operations, control flow, conditionals, loops, and functions, Python types and expressions, Strings, lists, and tuples, names, mutable and immutable values, List operations and slicing, Dictionaries, Functions, Object oriented programming, Abstract data types, Classes and objects, Encapsulation and data abstraction, Inheritance, Namespace and Object Orientation.<br><b>Practical:</b> <ul style="list-style-type: none"><li>Student Record Management System (Procedural Approach)</li><li>Bank Account Simulation Using OOP</li></ul> |   |   |   |   |   |
| <b>Abstract Data Types and Linear Structures:</b> Abstract Data Types (ADTs), ADTs and classes, introduction to OOP, classes in Python, inheritance namespaces, shallow and deep copying Introduction to analysis of algorithms, asymptotic notations divide & conquer, recursion, analyzing recursive algorithms- Stack ADT, Queue ADT<br><b>Practical:</b> <ul style="list-style-type: none"><li>Implement Custom Stack and Queue ADTs with Recursion and Algorithm Analysis</li><li>Recursive Merge Sort with Operation Count and Custom Object Sorting</li></ul>  |   |   |   |   |   |
| <b>Sorting and Searching:</b> Sorting Algorithms: Bubble sort, selection sort, insertion sort, merge sort, quick sort, analysis of sorting algorithms, Searching Techniques: linear search, binary search, hashing, hash functions, collision handling, load factors, rehashing, and efficiency<br><b>Practical:</b> <ul style="list-style-type: none"><li>Implement sorting algorithms in Python Bubble Sort, Selection Sort</li><li>Implement Linear Search, Binary Search, Hash Table with Collision Handling</li></ul>  |   |   |   |   |   |
| <b>Tree Structures:</b> Tree ADT, Binary Tree ADT, tree traversals, binary search trees, AVL trees, heaps, multiway search trees<br><b>Practical:</b> <ul style="list-style-type: none"><li>Implement Binary Tree ADT</li><li>Implement an AVLTree class with Rotations (LL, RR, LR, RL)</li></ul>  |   |   |   |   |   |

**Graph Structures:** Graph ADT, representations of graph, graph traversals, DAG, topological ordering, greedy algorithms, dynamic programming, shortest paths, minimum spanning trees, Introduction to complexity classes and intractability

**Practical:**

- Implement Breadth-First Search (BFS), Depth-First Search (DFS)
- Implement Dijkstra's Algorithm for shortest path (Greedy)

**Weightage:** Continuous Assessment: 50%, End Semester Examinations: 50%

**Assessment Methodology:** Assignments (15), Quiz (10), Virtual Demo (20), Flipped Class Room (10), Review of Gate and IES Questions (25), Project (20)

|--|---------------------------|---|---|---|---|
| MC25106  | Advanced Java Programming | L | T | P | C |
|  |                           | 2 | 0 | 2 | 3 |
| <b>Course Objectives:</b> <ul style="list-style-type: none"><li>• To provide in-depth knowledge of advanced Java concepts.</li><li>• To enable students to develop Java applications using object-oriented and event-driven programming techniques.</li><li>• To develop proficiency in using Java frameworks, APIs, and libraries for building real-world applications.</li></ul>   |                           |   |   |   |   |
| <b>Core Java Fundamentals:</b> Java Virtual Machine, data types, variables, keywords, operators, expressions, control statements, classes, objects, constructors, access control, method overloading, static members, Arrays, Strings, Inheritance: types, constructors in inheritance, method overriding, use of super, abstract classes – interfaces, dynamic method dispatch. Packages and exception handling   |                           |   |   |   |   |
| <b>Practical:</b> <ul style="list-style-type: none"><li>• Write a Java program that demonstrates the use of classes, objects, constructors, method overloading, inheritance, super, and abstract classes.</li><li>• Create a Java application that includes built-in and user-defined exception handling using try, catch, finally, throw, and throws.</li></ul>   |                           |   |   |   |   |
| <b>Multithreading, JDBC, and Web Client UI Development:</b> Java Thread Model, Concurrent Programming, Thread Life Cycle, Thread Priorities, Creating and Managing Threads, Thread Methods and Exceptions, Inter-thread Communication, Synchronization. JDBC Architecture and Drivers, CRUD Operations – Connecting to Relational Databases. Web Client UI: HTML and CSS, Responsive Web Design using Bootstrap, JavaScript, React JS, Creating Reusable UI Components with React. |                           |   |   |   |   |
| <b>Practical:</b> <ul style="list-style-type: none"><li>• Implement multiple threads in Java using the Thread class and Runnable interface. Demonstrate thread lifecycle, priorities, and synchronization.</li><li>• Connect to a relational database (MySQL/PostgreSQL) and perform Create, Read, Update, and Delete operations using JDBC</li></ul>  |                           |   |   |   |   |
| <b>Java Servlets:</b> Java EE Architecture - Application Servers and Containers, Servlet API and Lifecycle, Handling Client Requests and Responses - Working with Databases through Servlets-Servlet Advanced Concepts: Request Dispatcher -Session Management, Cookies and Http Session, Working with Files, Non- blocking I/O in Servlets.   |                           |   |   |   |   |
| <b>Practical:</b> <ul style="list-style-type: none"><li>• Implement a servlet for uploading files to the server and downloading them using Multipart Config and File Output Stream</li><li>• Develop a servlet to handle HTTP GET and POST methods. Accept form data (e.g., user registration) and display it.</li></ul>   |                           |   |   |   |   |

**Java Server Pages and JSTL:** JSP Architecture and Lifecycle, Action Elements, Implicit Objects, Scripting Elements, Scope and EL (Expression Language), JSP Standard Tag Libraries (JSTL), Developing Dynamic Web Applications with JSP.

**Practical:**

- Design a responsive UI form using Bootstrap and React to capture user input and display the result
- Create a JSP application using scripting elements, EL for data display, and JSTL for conditional and loop-based rendering.

**Java Frame works:** MVC Architecture, Spring Framework, Spring Modules, Spring MVC and Spring Boot, Hibernate Framework, Other Popular Frameworks. Maven Installation, Maven Core Concepts - Basic Structure of the POM File, Maven Build Life Cycles, Phases and Goals - Maven Build Profiles

**Practical:**

- Build a Java application using Hibernate and JPA annotations to perform CRUD operations on a Student entity.
- Mini-project integrating Spring and Hibernate framework.

**Weightage:** Continuous Assessment: 50%, End Semester Examinations: 50%

**Assessment Methodology:** Assignments (15), Quiz (10), Virtual Demo (20), Flipped Class Room (10), Review of Gate and IES Questions (25), Project (20)
